1 Brackish irrigation
relative yield (Maas-Hoffman)
irrigation water EC (dS/m)
date palm
barley
alfalfa
tomato
2 Drip vs flood
H2 uptake (umol m^{-2})
irrigation interval (days)
3 Mulch / shade net
mulch (no shade)
shade net (no mulch)
H2 uptake (umol m^{-2})
cover fraction
4 Biochar
H2 uptake (umol m^{-2})
dose (% w/w)
5 Inoculation (CO uptake)
CO uptake (umol m^{-2})
51PRr3 gate
51PRr3 proportional
V53PRr2 gate
V53PRr2 proportional
inoculum share (%)
6 Carbon-fixation bound
C bound (ug C m^{-2} yr^{-1})
baseline
wet
scenario (0 baseline, 1 wet)
7 H_2 leakage
H2 uptake (umol m^{-2})
H_2 multiple of background
8 Solar park
H2 uptake (umol m^{-2})
panel cover fraction
9 Cloud seeding
H2 uptake (umol m^{-2})
seeding intensity (1 = +10 % rain)
10 Compaction
H2 uptake (umol m^{-2})
vehicle passes
11 Warming
rain -20%
rain +0%
rain +20%
H2 uptake (umol m^{-2})
air warming (C)
12 Inoculated alfalfa
inoculated relative yield
A fao fixed leaching
B twin physics
C fitted fresh
C fitted dry
irrigation water EC (dS/m)
